

PROFILE SEAL BONDING

Know-how and technology for new and existing profile sealing application systems

As a specialist for application systems and automation, ATN's production plants stand for very high availability, user-friendliness and technical know-how. This also includes the systems for fully automatic profile seal bonding. Here, too, we develop individual and customer-specific system concepts that guarantee quality profile seal application. But we also provide a full range of services for existing plants, from ensuring plant performance to expansion or adaptation of your system.

New profile seal bonding plants

- Individual system concepts for profile seal application on vehicle doors, panorama glass sunroofs and other components
- Profile seal application as endless seal or cut-to-length seal
- Fully automated butt bonding (patent)
- Quality monitoring of the sealing layer and ensuring correct position during application (patent)

Service for existing plants

- Service partner for Grohmann Engineering profile sealing systems
- Spare parts service
- Repair and service
- Type integration into ATN or Grohmann Engineering plants
- Cycle time optimization
